DESCRIPTION

The MKB4118 uses Mostek's Poly R N-Channel Silicon Gate process and advanced circuit design techniques to package 8192 bits of static RAM on a single chip. Mostek's Address Activated™ circuit design technique

is utilized to achieve higher performance, low power, and easy user implementation. The device has a $V_{IH} = 2.2$, $V_{IL} = 0.8$, $V_{OH} = 0.4$ making it totally compatible with all TTL family devices.

NOTES:

1. All voltages referenced to V_{SS}.
2. Measured with 0 ≤ V_I ≤ 5V and outputs deselected (V_{CC} = 5V)
3. A minimum of 2ms time delay is required after application of V_{CC} (+5V) before proper device operation can be achieved.
4. Effective capacitance calculated from the equation C = I_{OL}Δt/ΔV with ΔV = 3V and V_{CC} nominal
5. Standby mode is defined as condition with addresses, latch and WE remain unchanged.
6. AC timing measurements made with 2 TTL loads plus 100pF.

SUPPLEMENTAL DATA SHEET TO BE USED IN
 CONJUNCTION WITH MOSTEK MK4118(P/N) SERIES DATA SHEET

The MKB4118 is designed for all wide word memory applications. The MKB4118 provides the user with a high-density, cost-effective 1K x 8 bit Random Access Memory. Fast Output Enable (\overline{OE}) and Chip Select (\overline{CS}) controls are provided for easy interface in microprocessor or other bus-oriented systems. The MKB4118 features a flexible Latch (\overline{L}) function to permit latching of

the address and \overline{CS} status at the user's option. Common data address bus operation may be performed at the system level by utilizing the L and \overline{OE} functions for the MKB4118. The latch function may be bypassed by merely tying the latch pin to V_{CC}, providing fast ripple-through operation.
