

LAW ABIDING TECHNOLOGY

CREDIT CARD AUDIO RECORDER

Main functions:

- Audio resolution 24 bit
- No button, touch swipe control
- High quality recording in noisy environments
- Up to 35 hours best quality audio records
- Up to 2 months in standby mode
- Password protected access to the stored data
- Voice-activated recording system (VAS)
- Customized design

Description:

Nevo is a small-sized audio recorder with a footprint of a credit card and a thickness of 1.5 mm. It is characterized by high microphone sensitivity that allows high quality voice recording even in difficult acoustic conditions like no environments or outdoors.

The voice recorder ultra-low power consumption allows it to record continuously for more than 50 hours with the highest 24bit @ 16kHz audio quality. Implemented Voice activation system significantly extends this time.

Nevo credit card voice recorder is supplied with a USB adaptor for records download and configuration settings.

The records can be set to have metadata with additional information about the records, and to have limited password protected access.

A special feature of Nevo is touch swipe interface. The voice recorder has no mechanical buttons; therefore it is more robust and indistinguishable from a regular smart card.

Specification:

- Audio resolution : 16/24 bit
- Sampling frequency: 8kHz/16 kHz / 25 Khz
- Compression: none or 4bit ADPCM
- Max recording time 150 hours@8 KHz (ADPCM)
- Consumption while recording <4 mA
- Recording time : 55 hours
- Voice activated : 116 hours, 0.1mA in stand by mode (approx 60 days)
- Password protected access to the stored data
- Size: 85x54x1.5 mm.
- Weight: 4 g.
