

# THE TC-803 OFF-LINE CRYPTOGRAPHIC SYSTEM

is an advanced, easy to operate, portable solid-state ciphering system intended for application in the diplomatic service, police and other government agencies. The TC-803 is a high security OFF-Line system offering maximum protection even in respect to electrical and acoustical radiation. The advanced technology and the interchangeable printed circuit boards guarantee easy maintenance.

The complete cipher system is contained in a standard size SAMSONITE attaché case.

Various accessories are available for operational flexibility, for instance:

- Punched tape reader
- Punched tape perforator
- Teletypewriter adapter

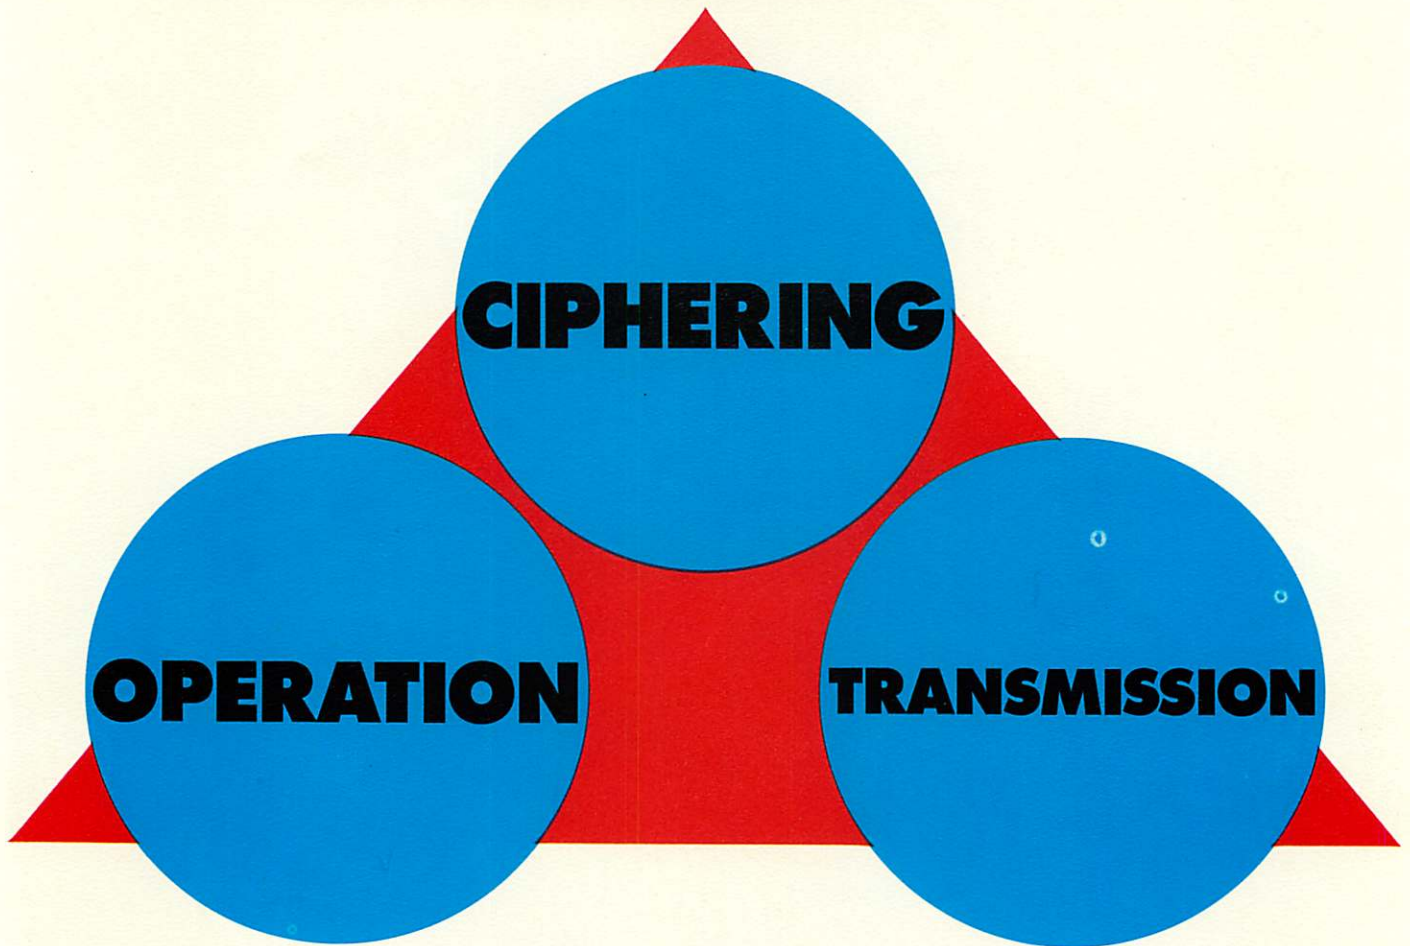

Carriage return, line feed, letter/figure shift, etc. are introduced automatically whenever necessary.

# TC-803

In choosing a ciphering system three important completely separate security factors are most important for the customer

# SECURITY

Neglecting only one of these security factors is enough to provide doubts about the complete system.
